

# DM SERIES OPTIONS AND ACCESSORIES SPROCKETS

For drum motors and idler pulleys

## Sprockets

### Hygienic, quiet and long lifespan

The solid homogeneous polymer sprockets are suitable for applications in food processing with high hygienic requirements: Easy to clean and extremely resistant to oil, grease and chemicals. Furthermore, they ensure smooth running and provide a long lifespan of the belt due to its low abrasion. These sprockets are available for the most common positive drive solid homogeneous belts as well as for motors in applications with drive belts. Based on the specifications of the specific belt manufacturer, up to 44 teeth mesh with the profile.

**Note:** It is important to incorporate a calculation of belt pull and speed that is adjusted to the greater outer diameter of the drum motor. Please refer to the velocity factor (VF) in the table on page 135. Only one fixed sprocket per drum motor should be fitted to allow for belt expansion.

### Technical data

<b>Material</b>	Polyketon (PK) with stainless steel inlay
