

Sensor kit

Sensors detect materials on the conveyors and determine their position. Reflex light barriers are used, which require a reflecting mirror (reflector) on the opposite side of the light barrier in order to return the light beam.

The sensor kit consists of the sensor and the matching plastic housing, including fastening clip. The housing can be attached directly to the roller conveyor or to a universal support.

Designation	Dimensions	Reference number
Sensor kit	250 x 95 x 115 mm (L x W x H)	on request

Reflector kit

The reflector kit returns the light beam back to the sensor. The kit includes a fastening clip and can be attached directly to the roller conveyor or to an universal support.

Designation	Dimensions	Reference number
Reflector kit	54 x 18 x 30 mm (L x W x H) (H 39 mm with studs)	64000905

Universal support, fixed

Side guides, sensors, reflectors and other add-on components, such as scanners, are attached to the fixed universal support. Fixed universal supports are attached directly to the side profile.

Designation	Dimensions	Reference number
Universal support, fixed	60 mm (55 mm above T.O.R.)	63161717

Universal support, flexible

Side guides, sensors, reflectors and other add-on components, such as scanners, are attached to the flexible universal support. Flexible universal supports are attached laterally to the profile. Each of these holders can accommodate two flexible universal support brackets.

Designation	Dimensions	Reference number
Universal support, flexible	200 mm (55 mm above T.O.R.)	63161726
